

PRESS RELEASE**Flair Airlines selects Safran Carbon Brakes on its 737NG and 737MAX fleet****Paris, September 13, 2021**

Canadian ultra-low-cost carrier Flair Airlines has selected Safran Landing Systems wheels and carbon brakes to equip its 737NG and 737MAX aircraft fleet.

Safran Landing Systems will supply Flair with wheels, brakes and carbon heat sinks produced at its US-based manufacturing plant in Walton, Kentucky. Flair's operations will be supported by Safran Landing Systems' commercial and technical aftersales organization in Canada and in the United States.

The wheels & carbon brakes maintenance and logistics services will be

provided in partnership with Hope Aero Propeller & Components, Canada's leading aircraft component MRO specialist, from its facilities in Mississauga, Ontario and Winnipeg, Manitoba.

This award reinforces Safran Landing Systems' worldwide leading position on the 737NG and 737MAX wheels and carbon brakes market, with almost 3,500 airplanes equipped or committed to Safran, at over 100 operators.

This selection is also a testimony to Safran Landing Systems carbon material's superior performance, especially in regards to its Anoxy®66 catalytic oxidation protection systems against runway deicers, which are commonly used in Flair's route network.

Commenting on this announcement, Guy Borowski, Vice President Maintenance at Flair said, *"As an ultra-low-cost carrier, Flair was seeking a turn-key, cost-effective wheels and brakes solution to support this new phase in our company's history. Right from the beginning, Safran Landing Systems and its Canadian partner demonstrated a strong proactive approach to build a long-lasting partnership with Flair and to meet our aggressive requirements."*

"Safran Landing Systems' selection is also an important step for Flair in lowering its carbon footprint and becoming Canada's greenest and most sustainable airline", Guy Borowski added. Indeed, the operational advantages of the Safran carbon brake on the 737NG and 737MAX include a lighter weight compared with any other available steel or carbon option - up to 770 pounds (350 kg), which decreases fuel consumption and therefore CO2 emissions.

Nicolas Potier, Executive Vice President, Wheels & Brakes Division, Safran Landing Systems, added, *"We are delighted with our selection by Flair, and welcome the opportunity to provide efficient, high-performance products that will support Flair's "F50" ambition to operate 50 aircraft within 5 years. This contract also reinforces our regional leadership position, with Safran Landing Systems supporting 100% of carbon brakes-equipped Boeing 737NG and 737MAX in Canada."*

Safran is an international high-technology group, operating in the aviation (propulsion, equipment and interiors), defense and space markets. Its core purpose is to contribute to a safer, more sustainable world, where air transport is more environmentally friendly, comfortable and accessible. Safran has a global presence, with 76,000 employees and sales of 16.5 billion euros in 2020 and holds, alone or in partnership, world or regional leadership positions in its core markets.

Safran is listed on the Euronext Paris stock exchange and is part of the CAC 40 and Euro Stoxx 50 indices.

Safran Landing Systems is the world leader of aircraft landing and braking systems. The company has partnerships with 30 airframers in civil, regional, commercial and military transport, and supports 27,000 aircraft.
