Aircelle signs an engine nacelle support agreement for Hawaiian Airlines’ Airbus A330 jetliner fleet

Phoenix, Arizona, USA, April 10, 2014

Aircelle (Safran) today announced it will support Hawaiian Airlines’ growing fleet of Airbus A330s under terms of a 10-year agreement covering pool services for thrust reversers on the jetliners’ Rolls-Royce Trent 700 engines.

In the framework of this contract – announced today at the MRO Americas 2014 conference Aircelle will provide access to large nacelle components for lease by Hawaiian.

The agreement builds on Aircelle’s "service catalogue" approach for customers, enabling them to choose support, services and MRO capabilities that are tailored to their specific fleet and operational requirements. The Hawaiian contract reinforces Aircelle’s position in the U.S. and North American marketplace for the maintenance, repair and overhaul of jet engine nacelles and their components.

"With the largest pool of Trent 700 thrust reverser components, Aircelle is ready to provide world-class support as Hawaiian grows its A330 fleet and expands the route network," explained Martin Sion, the Chairman and CEO of Aircelle. "This airline also will benefit from Aircelle’s global presence for maintenance, repair and overhaul services."

Hawaiian Airlines is the largest and longest-serving carrier for the U.S. state of Hawai‘i, with its A330s deployed on long-haul flights to the United States mainland and to Asia-Pacific destinations. It began operating the twin-engine jetliner in 2010, and plans to reach a fleet size of 22 A330s by 2015.
