CFM, Sriwijaya Air announce CFM56-7B engine order

- Plans to add additional CFM56 engine to support growth

LE BOURGET — 16 June 2015 — Sriwijaya Air today announced a firm order for CFM56-7B engines to power two B737-900ER, as well as its intent to exercise options for up to 20 additional 20 737 aircraft. The firm CFM56-7B order is valued at $44 million U.S at list price.

Based in Jakarta, Indonesia, Sriwijaya Air began operations in 2003 and now is the third largest airline in Indonesia by market share. The airline currently operates a fleet of 41 Boeing 737 aircraft powered by the CFM56-7B and CFM56-3. This fleet serves 40+ domestic and international routes.

"We are glad to add CFM-powered Boeing 737-900ER aircraft to our current 737 fleet,' said Chandra Lie, president, director and CEO of Sriwijaya Air. "We know from experience that CFM builds high quality, very reliable engines. This new order reinforces our customers' satisfaction in what CFM has delivered with the CFM56 product line."

"This new order is testament of Sriwijaya Air's trust in CFM engine" said Chaker Chahrour, vice president and general manager of Sales & Marketing for CFM parent company GE Aviation. "We are proud that Sriwijaya Air has again selected CFM to be such an integral part of their operations over the long term."

All of Sriwijaya Air's new 737s will be powered by the CFM56-7B engine, the new production configuration introduced in mid-2011. CFM used advanced computer codes and three-dimensional design techniques to improve airfoils in the high- and low-pressure turbines for better engine performance. In addition, the company improved engine durability and reduced parts count to achieve lower maintenance costs. When combined with airplane improvements, the engine provides two percent better fuel efficiency and up to four percent lower maintenance costs.

CFM has been the sole engine supplier for all Boeing 737 aircraft models since 1981.

About CFM International
CFM56 engines are a product of CFM International, a 50/50 joint company between Snecma (Safran) and GE and the world's largest supplier of commercial aircraft engines. To date, more than 28,000 CFM56 engines have been delivered to more than 550 operators around the globe. This fleet has achieved more than 750 million flight hours as the most reliable engines in the air. For more information, visit us at www.cfmaeroengines.com or follow us on Twitter @CFM_engines

About CFM International

The CFM56 and LEAP engines are products of CFM International, a 50/50 joint company between Snecma (Safran) and GE. CFM is the world's leading supplier of commercial aircraft engines, with more than 27,200 delivered as of December 31, 2014 to more than 530 operators around the globe. The company CFM officially launched the LEAP engine, which is its first all-new centerline engine in nearly 40 years, in 2008.

The LEAP engine promises to bring double-digit improvements in fuel efficiency, emissions and noise, while the legendary reliability and low cost of ownership of its predecessor, the ubiquitous maintaining CFM56 engine family. The LEAP-1A is an engine as an option on the A320neo family; and the LEAP-1C engine is the sole Western powerplant for the COMAC C919; and the LEAP-1B is the sole powerplant for Boeing's new 737 MAX.
